

# Hypoglycaemia Alarm HSA-01

## LOW BLOOD SUGAR GLUCOSE MONITOR - FOR THE DETECTION OF SYMPTOMS OF HYPOGLYCAEMIA FOR PEOPLE WITH DIABETES.

The HSA-01 can detect the symptoms of Hypoglycaemia, low blood glucose in people with Diabetes. The HSA-01 is a self contained device that incorporates two sensors located on the rear of the product, styled like a wristwatch. The sensors, when in contact with the skin of the wrist or ankle respond to perspiration and body temperature (cold sweats), two common symptoms of low blood sugar. If a cold sweat is detected, a built in vibrator operates along with a tone beeper alarm. The persistent vibration from the alarm is sufficient to disturb most users from sleep enabling a blood test and remedial action to be taken.

The HSA-01 is for use when sleeping, it is not designed or intended to be used as a daytime alarm. When used in accordance with the instruction guide, the HSA-01 can detect early symptoms of hypoglycaemia and reduce the likelihood of more serious complications.
